DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, 10-17, 36-46, drawn to the apparatus comprising an oxygen sensor including a ferroelectric metal oxide, classified in class 422, subclass 82.02.

Group II, claim(s) 2, 8-9, 54-66 drawn to the apparatus comprising an oxygen sensor including a non-stoichiometric metal oxide with at least two compositional constituents, classified in class 422, subclass 186.06.

Group III, claim(s) 18-35, drawn to a method of manufacturing, classified in class 204, subclass 400.

Group IV, claims 47, 49-53 drawn to a combination comprising a metal oxide sensing member and an electrical circuit, classified in class 361, subclass 525.

Group V, claims 48, 67-71 drawn to a combination (a method for detection), classified in class 436, subclass 136.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

the inventions of Groups I, III and II, IV-V do not have common special technical feature, as the special technical feature of Groups I and III is a ferroelectric metal oxide sensing member, while the special technical feature of Groups II, IV and V is non-stoichiometric metal oxides;
the common technical feature of inventions of Groups I and III is a ferroelectric material, which is well known in the art, see e.g. US 4,684,207, and thus is not a special technical feature;
the common technical feature of inventions of Groups II and IV-V is a non-stoichiometric metal oxide, which is well known in the art and thus is not a special technical feature;

Art Unit: 1743

the common technical feature of inventions of Group IV and V is a non-stoichiometric metal oxide and electric field, which is well known in the art, see e.g. US 3,619,381, and thus is not a special technical feature.

A telephone call was made to James B. Myers on 10/22/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
